

Apple Variety and Pollenizer Information

Getting reliable and good yields from apple trees generally requires that more than one variety be present for proper cross-pollination. The chart below lists the various types that we have carried and their bloom times.

Choose the letter corresponding to the bloom time (A-E), and make sure that the varieties that you are considering are not more than 1 letter apart. In other words, A-B works, B-D works, but A-D would not reliably work. This is not applicable to multi-graft specimens, as they are already properly balanced for pollination.

Also, varieties in **bold** are considered partially self-fertile, but will benefit from a companion (these are also some of the best pollenizers). Varieties in *italics* do not produce (much) viable pollen, and will not reliably pollenize other varieties. Many Crabapples are also great apple pollenizers, and are also listed.

Ripening Times

VE- Very early; July to Early August

E- Early; August

M- Mid; Late August to Mid September

L- Late; Late September to Mid October

VL- Very Late; Mid October+

Variety **Ripe** **Size/Shape** **Color** **Taste/Uses/Etc.**

Early Bloom (A)

<i>Gravenstein</i>	E	Large round-flattened	Orange-yellow, red stripes	Old fashioned pie/cider/cooking apple
Idared	VL	Large	Bright Red	Crisp, mildy acidic, used a lot for cooking
Lodi	VE	Large	Green	Cooking apple. Sweet-tart flavor
Yellow Transparent	VE	Medium-large	Transparent pale-yellow	Sweet, good for applesauce, cooking, eating

Early-Mid Bloom (B)

Braeburn	VL	Medium-large	Yellow, orange-red blush	High Quality, early bearing
Liberty	L	Medium-large	Orange, red blush covered	Disease resistant! Good for any use.
Pink Pearl	M	Medium	Green/cream skin	Pink flesh, pink flowers, sweet. Ornamental!!
Red Jonathan	L	Medium, round	Bright Red	Good eater/cooker, nice looking fruit
Red McIntosh	M	Medium-large	Bright dark red	Tart, spicy. Good for cider, fresh eating.
Scarlet Sentinel - columnar	M	Very Large	Greenish yellow and red	Crisp, sweet, juicy white flesh. Very Productive.

Mid Bloom (C)

Ashmead's Kernel	VL	Medium, round-conical	Greenish yellow, brown flush	Yellowish flesh. Unique nut-like flavor when ripe - great for cider.
